

Product: Complete Dock Solution

Industry: Industrial

Application: Loading Dock

CASE STUDY

Dock Equipment

Customer and Safety Director Asks for Comprehensive Dock Solution

The Customer and Safety Director was looking to add a truck restraint to an aging dock. Upon further investigation, the customer realized that the dock equipment on hand was aging as well.

Before

PROBLEM

The customer wanted the truck restraint to prevent both horizontal and vertical movement, but soon realized the enclosure was insufficient and that the manual leveler wasn't operating well either.

SOLUTION

They asked the DH Pace team to develop a comprehensive solution that included a new restraint, new dock seal, a new safety barrier lip to enhance the director's concerns, a new air bag leveler to replace their manual one and a new awning to ensure the opening was enclosed properly.

CONCLUSION

The customer loved the complete solution and is considering DH Pace for their future shipping dock renovation next year.
