

Product: Bi-Fold Hanging Doors and Operator

Industry: Civil Municipality

Application: City Garage

CASE STUDY

Industrial, High-Speed and Specialty Doors

Unique Doors and Architectural Panels Add New Life to Facility

The City's current doors were functional but were constantly breaking down. During a building renovation they asked DH Pace for a better solution.

Before

PROBLEM

The City was using bi-folding hanger doors, which opened outward for a large opening, in one of their municipal garages. The doors were very slow and were in constant need of repairs.

SOLUTION

DH Pace recommended replacing the current bi-folding doors with four-fold doors, which opened upward. In addition, the team recommended covering the doors with the same architectural panels that were being placed on the building during its renovation.

The result was a much quicker, safer, and more reliable door for the City with great curb appeal.

CONCLUSION

Many products can be customized with existing products to not only fix reoccurring problems, but also to offer new design avenues that wouldn't typically be available.
