

**Product:** Hydraulic Steel Door  
**Industry:** Agriculture  
**Application:** Equipment Storage Facility

CASE STUDY

## Industrial, High-Speed and Specialty Doors

### New Local Farm Building Needed a Hydraulic Door

A local farm had purchased a hydraulic door for a new facility, however, they had never installed a door with a 40 foot by 14 foot opening.

#### Installation

#### PROBLEM

Since the contractor had never installed a door of this magnitude, they needed expert help to assist with the installation of the oversized door for their new building.

#### SOLUTION

DH Pace worked with the builders to get the door, which was already purchased, put together and in place. The door was installed at their facility over a couple days.

It featured hydraulic rams to open and close the door which are powered by a 2hp operator.

#### CONCLUSION

Even when products have already been purchased, such as the door with a pre-built building, DH Pace has the skills to help upgrade the original design and to install any type of door and operator on the market.
